

# Hyperion (BRIO) Performance Server Migration

(Proposed migration steps, settings and topology for XYZ Corporation)

Support: (800) 337-6324, option 2, 2

<http://groups.yahoo.com/group/briouers/>

**Licenses:**

- 20 Explorer
- 1 Intelligence Server
- 2 Designer
- 40 Insights

**Blade HS20**

IP 172.29.5.54

<http://ntpc1125/Brio/browse/login>

**NTPC1125 IBM HS20 (8832-G1X)**  
MS W2K server OS  
Brio (Hyperion) 8.2.1.45 Intelligence

- \* Insight Server
- \* Foundation

Sends via SMTP "Event Service" notifications to:  
briorpts@mail.pcb

Restore a backup of the repository database after installing the 8.1.x software version.

IP 130.5.3.16

ABC-WEB1

MS W2K - SQL2K, Brio 8.1 repository database

Replace the BrioPlatform subdirectory, then make file changes to reflect the SQL location and the new hostname.

IP 130.5.3.60

ABC-BRIO3

MS W2K - Brio 8.1.2 (Hyperion) End-user reporting tools

<http://abc-brio3/Brio/browse/login>

Sends via SMTP "Event Service" notifications to:  
brioadmin@xyzMAIL.com (Mial Host: ABC-COM2)

Install Key: 8M11-VJ123V

**Sales Reporting output Directory:**

O:\Data\Hyperion\Sales Reporting\Revenue\Textarea

**PAXMSTDLY output Directory:**

O:\Data\Hyperion\PODATA

**Connection Directory:**

O:\Data\Hyperion\Open Catalog Extensions

**Sales Reporting output Directory:**

G:\SOFTWARE\Sales Reporting\Revenue\Textarea

**PAXMSTDLY output Directory:**

G:\DATA\PODATA

**Connection Directory:**

G:\SOFTWARE\BRIO\Open Catalog Extensions

Change Hyperion BQY OCE username/password to access XYZAM3 server (The server name vaues in the DSN ODBC entries also need to be changed)

Brio queries to DB/2 on the AS/400

AS/400e-720  
XYZAM3  
(Mirrored XYZAM1)

## Major Install Steps

1. Microsoft Windows 2000 Server w Per seat setting
2. Select IIS 5, Terminal Services
3. Microsoft SQL 2000 Server – local / no intances
4. Change security properties from "Windows only" to "SQL Server and Windows"
5. Create login user - Brioadmin (with all server roles)
6. Manually create repository database - (owner Brioadmin)
7. Add user - Brioadmin to database in security section.
8. IBM AS/400 Client Access Express (ODBC Drivers)
9. Add ODBC entry for SQL repository (system DSN).
10. Add ODBC entries for AS/400 DB2 data sources.
11. Install Brio (Hyperion) 8.1.2 (One CD)
12. Verify Jrun Admin/Default connections
13. Restore "moved" Repository database (approx 150 tables)
14. Edit two tables to reflect new server name & SQL server
15. Replace the "BrioPlatform" subdirectory on the target server
16. Manual file updates (two text files), Config.dat, Server.xml
17. Manual edit batch file
18. Test start-up three batch files (Test ORB control change)
19. Start three services - Super Service first
20. Adjust Brio "Local Service Configurator" settings.
21. Install Insight plug-in via bqy access
22. Stop services
23. Brio (Hyperion) 8.1.2 upgrade (three CD's)
24. Manual SQL table change (one table) remove row - host
25. Edit startCommonServices batch file
26. Change OCE user/password for bqy entries
